

Backup and Protect Your Documents and Files

***eDocsOnline.com* is THE way to backup your documents, files and all important data. It is the only way to protect all your information against computer viruses, disk crashes, data corruption, and data theft.**

✓ **Off-site Backup of Your Documents**

We guard your data and save your life's work. Neither virus attacks, nor disk crashes will affect you anymore. Even when your computer is in a disaster mode, all your data is safely and securely stored online, and all your work is easily accessible from any Internet-connected device.

✓ **SSL Encryption**

We protect your information with Secure Socket Layer (SSL) encryption. The data is protected with a built-in 128-bit SSL code that is virtually impossible to decrypt. Store your sensitive and confidential files and documents without hesitation. Be assured that your communication with co-workers and distant employees, business partners and friends is conducted in an absolutely secure environment.

✓ **Permission-Based Access Level System**

You decide which individuals get permission to view, edit or delete your documents, sub-folders, or folders. By setting different levels of access, you can have your data completely blocked, or shared with colleagues, distant workers and business partners.

✓ **Virus Scanning**

You benefit from the virus scanning feature we provide. Virus scanning is updated regularly. It is set to automatically clean or quarantine any infected files. You can enjoy the piece of mind knowing that your documents are virus-free.

✓ **Thawte © Certified Site**

The Thawte © Secure Site program allows you to learn more about the web sites you visit before you submit any confidential information. Thawte certification also ensures that all information sent to *eDocsOnline.com* is protected against disclosure to third parties. To see for yourself, click on the Thawte logo on the left.

eDocsOnline.com knows that your security is essential to you. Therefore, we provide a special protection plan to ensure that the safety of your important information is never compromised.

Our security and monitoring measures include, but are not limited to:

- physical security of hosting facility
- data security with strict control of direct access to the production servers
- automatic backup on a nightly basis
- user authentication
- 24/7 monitoring and support of network connection and server availability

We devote significant resources to continually develop and enhance our security and operations infrastructure. The result is that we maintain a high-level of security and privacy of your information.

All you have left to do is to enjoy the protection and the peace of mind that our hosting facility and security management provides. Now you can focus on your business and customers, and be more creative and experimental!
